

Lutradur, Evolon and Tyvek

The adoption of manmade spunbonded materials from industrial uses for use in mixed media textile art has created a new world for artists to explore. Lutradur, Evolon and Tyvek are 3 of these fibres that can be painted, stitched, and distressed with heat, each one having particular characteristics that produce unique results. We'll explore each one, and also combinations - together and with other fibres - creating samples with various tools and techniques. It will be an exciting and inspiring adventure into this new trend in creative textiles.

This is a three day workshop. Kits will be provided at cost.
